Planning the Flower Border

Much of the excitement of creating an herbaceous border lies in its great flexibility of design. In form, placement, and selection of plants, the contemporary border follows few rigid rules and allows fullest expression of the gardener’s taste.

The first step in planning the material for an all-season, mixed perennial border is to select key plants for line, mass, color, and dependability. Line is the silhouette or outline of a plant, mass is its shape or denseness, and dependability refers to its ability to remain attractive with a minimum of problems. Garden books and catalogues can be very useful for reference.

The most attractive flower borders are those which are located in front of a suitable background such as a fence, shrubbery, or a building. In some cases, tall flowers such as hollyhocks or sunflower may serve a dual purpose as flowers in the border and as background plants. Annual or perennial flowers of medium height may serve as background plants for a short border planting.

A general rule is to avoid a ruler-straight front edge, unless the garden is very spacious or formal. A gentle to boldly sweeping curve, easily laid out with a garden hose, is best even along a fence. The border can taper as it recedes from the main viewing point if an effect of distance is desired. The deeper the curve, the slower the eye moves and the greater will be the visual enjoyment. A border outlined with bricks or flat stones set flush with the soil is better than a steeply cut lawn edge which must be trimmed after mowing.

Even the advanced gardener finds it advantageous to plan a border to scale on graph paper. The hardest task, organizing the selection of plants, will be simplified if only two main mass forms are considered: drifts and clumps. Drifts are elongated groupings of a plant that flow through sections of the border. Clumps consist of circular groupings of a variety, or a single large plant such as a peony. The length of drifts and the diameter of clumps, as well as their heights, should be varied for best effect, and the dimensions should always be in proportion to the overall size of the border.

Establish plants in groups large enough to form masses of color or texture. As a rule, five to seven plants will create the desired effect. A large delphinium or peony will be of sufficient size to be attractive, but a random collection of different small- to medium-sized plants will present a disorganized, checkerboard appearance. Each group of flowers should have an irregular shape. These masses of color and texture should blend into a pleasing pattern of color harmony. Dwarf flowers may be used as a continuous edging or border along the front of the bed.

Flower borders may be of any width, depending on the space available. In a small yard the bed may be only 2 or 3 feet wide. In a spacious location, the border planting may have a width of 6 or 8 feet. If the border is quite deep, a pathway of stepping stones may be helpful as a means of working among the flowers without compacting the soil.

Tall flowers should be selected for the back part of the bed, with medium-height species in the middle, and dwarf varieties along the front as edging plants. This is very easily done because the height of all varieties is stated in seed catalogs. Plants along the front edge of the flower bed should be located far enough back to allow easy mowing of the lawn.

Plant height is best limited to 2/3 the width of the border, e.g., no plants taller than 4 feet in a border 6 feet wide. Height lines should be broken up by letting some tall plants extend into the medium height groups, with a few recessed clumps or drifts leading the eye back into the border. This gives a more natural effect than a step profile. Try to vary heights, but in general, keep taller plants in the back and shorter ones toward the front.

The distance between plants in a flower border depends on the form of the individual plants and the effect which
is desired in the landscape. Allow adequate space between
plants. Many gardeners crowd their plants too much.
As a rule, the tall, spired-type flowers such as hollyhock,
gladiolus, and rocket snapdragons which are trained to
a very few stems, should be spaced about 1/4 as far apart
as their mature height. Tall bushy plants may be spaced
about 1/2 as far apart as their mature height. Rounded,
bushy annuals and perennials should be spaced about as
far apart as their mature height. In all cases, if a solid mass of plants
is desired, the spacing may be reduced. If individual
plants are to be conspicuous as specimens and allowed to
produce large flowers, the distances should be increased.
The enormous color range in perennials, plus their easy
relocation if disharmony occurs, gives the gardener great
latitude in choosing and combining colors. A border in
tones of the same color can be effective, several closely
related colors may be used, or the border may be made
wildly exuberant with a vast variety of hues in one or
more seasons. Hues are modifications of color such as
orange-red. The objective is a balanced composition
in every season, with no section being at any time
too heavily weighted with one color, and the bloom
distributed so that it always makes a pleasing pattern
through the bed.

Many gardening books give excellent lists of compatible
colors; these plus a garden notebook and camera are
invaluable for planning and revising color schemes.
For real floral artistry, it is perhaps more important to
consider intensity, which is the vividness of a color, rather
than hue. For example, light tones placed near dark ones,
or contrasting palest tones with the most intense, can give
new interest and life to the border. Also, consider location
and color. White is especially good near patios because it
shows up well in the evening or dusk hours when patios
are often in use. Some colors are suitable only as dramatic
accents: deep, pure red clashes with almost anything
(unless softened by dark green foliage), yet properly used
it evokes strength and depth. White flowers and gray
foliage are indispensable as separators of conflicting colors.
Red, orange, and yellow are warm colors. Blue, green, and
violet are cool colors. The use of warm colors in the flower
border of a small yard will give the illusion of little space.
Conversely, the use of cool colors gives the impression of
openness and space. In general, the smaller the area, the
fewer warm colors should be used.

As gardeners become adept at producing constant color
harmony in the border, they become more aware of the
roles played by plant forms and foliage. Good foliage is
obviously vital in plants with short blooming periods.
Consider how much of the plant foliage will be usable
and whether it is a positive or negative attribute. Some
plants practically disappear when their blooming season is
over (i.e., oriental poppy and bleeding heart), but others
stay presentable even when not in flower. Plants with
distinctive forms, color, and foliage — airy and delicate,
or strong and solid — are wonderfully useful for creating
interest. Ornamental grasses, and even handsome-foliaged
vegetables like artichoke and asparagus can be used for
effect.
The most logical way to choose plants is first by location,
second by period of bloom, then by height and width,
and finally by color. Location takes into account the
amount of sun or shade and water required. This
information is easy to find in books on perennials, in
catalogs, and even on the Internet.
The only restrictions on any given plant will be
environmental: a lack of ability to tolerate winter or
summer temperature extremes; special soil, moisture, or
light needs; and any limits the gardener must place on
time available for maintenance.

Even in a small border, single plants of different varieties
should not be used as it gives a jumbled look. Do not
set in precise rows but in groups, as they might grow
in nature. Allow enough space for each group to grow
comfortably. Decide which flowers you like best, and let
these be the basis of your planting. Place them in several
spots down the length of the border if you like, but don’t
overdo any one plant.

The longer the border has flowers in bloom, the more you
will enjoy it. Consider the months when each plant will
be at its best. Do not confine yourself to material that
blooms all at one time; aim for a steady succession of
color.

A last bit of advice: don’t be afraid to be bold, even if
it results in some mistakes. Flowers are easy to move,
change, or take out altogether. There is no need to be
conservative or confined. Flowers are fast growers and
can be transplanted at almost any time to help create the
desired effect.
